CFWForPhones has its wiki hosted on Read the Docs! **CFW For Phones** is a wiki that is dedicated to teaching you how to install custom firmware onto your phone!

## WHAT IS CUSTOM FIRMWARE?

Custom firmware (“CFW”) is a full software modification to your phone, comparable to “administrator access” on a computer. It allows you to do anything that the phone is physically capable of doing, rather than being limited by whatever the phone company allows you to do.

---

**Note:** This project is under active development.

---

## CONTENTS

## 2.1 Usage

### 2.1.1 Installation

To use Lumache, first install it using pip:

```
(.venv) $ pip install lumache
```

### 2.1.2 Creating recipes

To retrieve a list of random ingredients, you can use the `lumache.get_random_ingredients()` function:

`lumache.get_random_ingredients(kind=None)`

Return a list of random ingredients as strings.

**Parameters**

**kind** (*list[str]* or *None*) – Optional “kind” of ingredients.

**Raises**

*lumache.InvalidKindError* – If the kind is invalid.

**Returns**

The ingredients list.

**Return type**

*list[str]*

The `kind` parameter should be either `"meat"`, `"fish"`, or `"veggies"`. Otherwise, *lumache.get\_random\_ingredients()* will raise an exception.

**exception** `lumache.InvalidKindError`

Raised if the kind is invalid.

For example:

```
>>> import lumache
>>> lumache.get_random_ingredients()
['shells', 'gorgonzola', 'parsley']
```

## 2.2 API

---

*lumache*Lumache - Python library for cooks and food lovers.

---

### 2.2.1 lumache

Lumache - Python library for cooks and food lovers.

#### Functions

---

*get\_random\_ingredients*([kind])Return a list of random ingredients as strings.

---

#### Exceptions

---

*InvalidKindError*Raised if the kind is invalid.

---
